Palletizing and stretch  
wrapping of bags

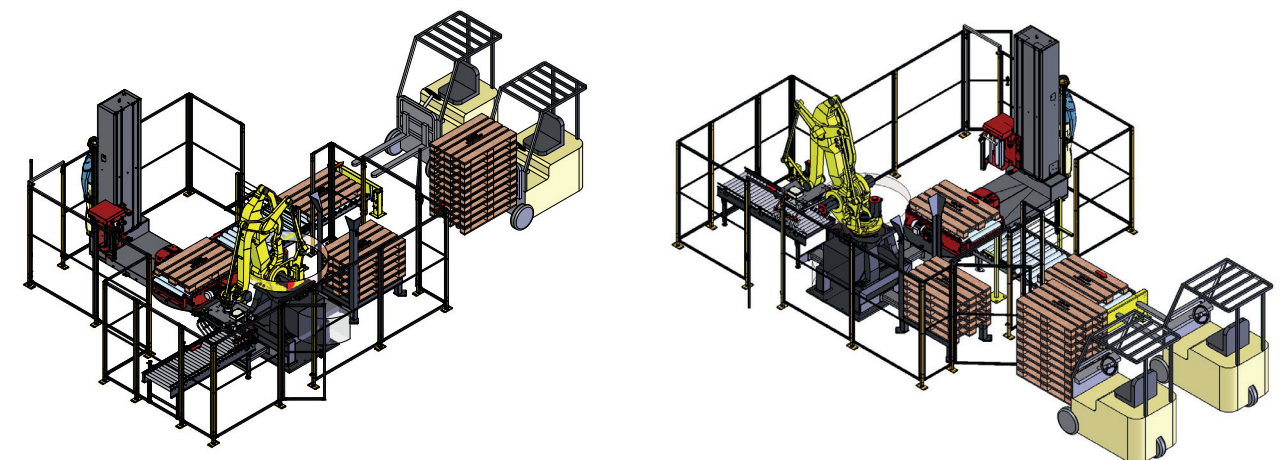

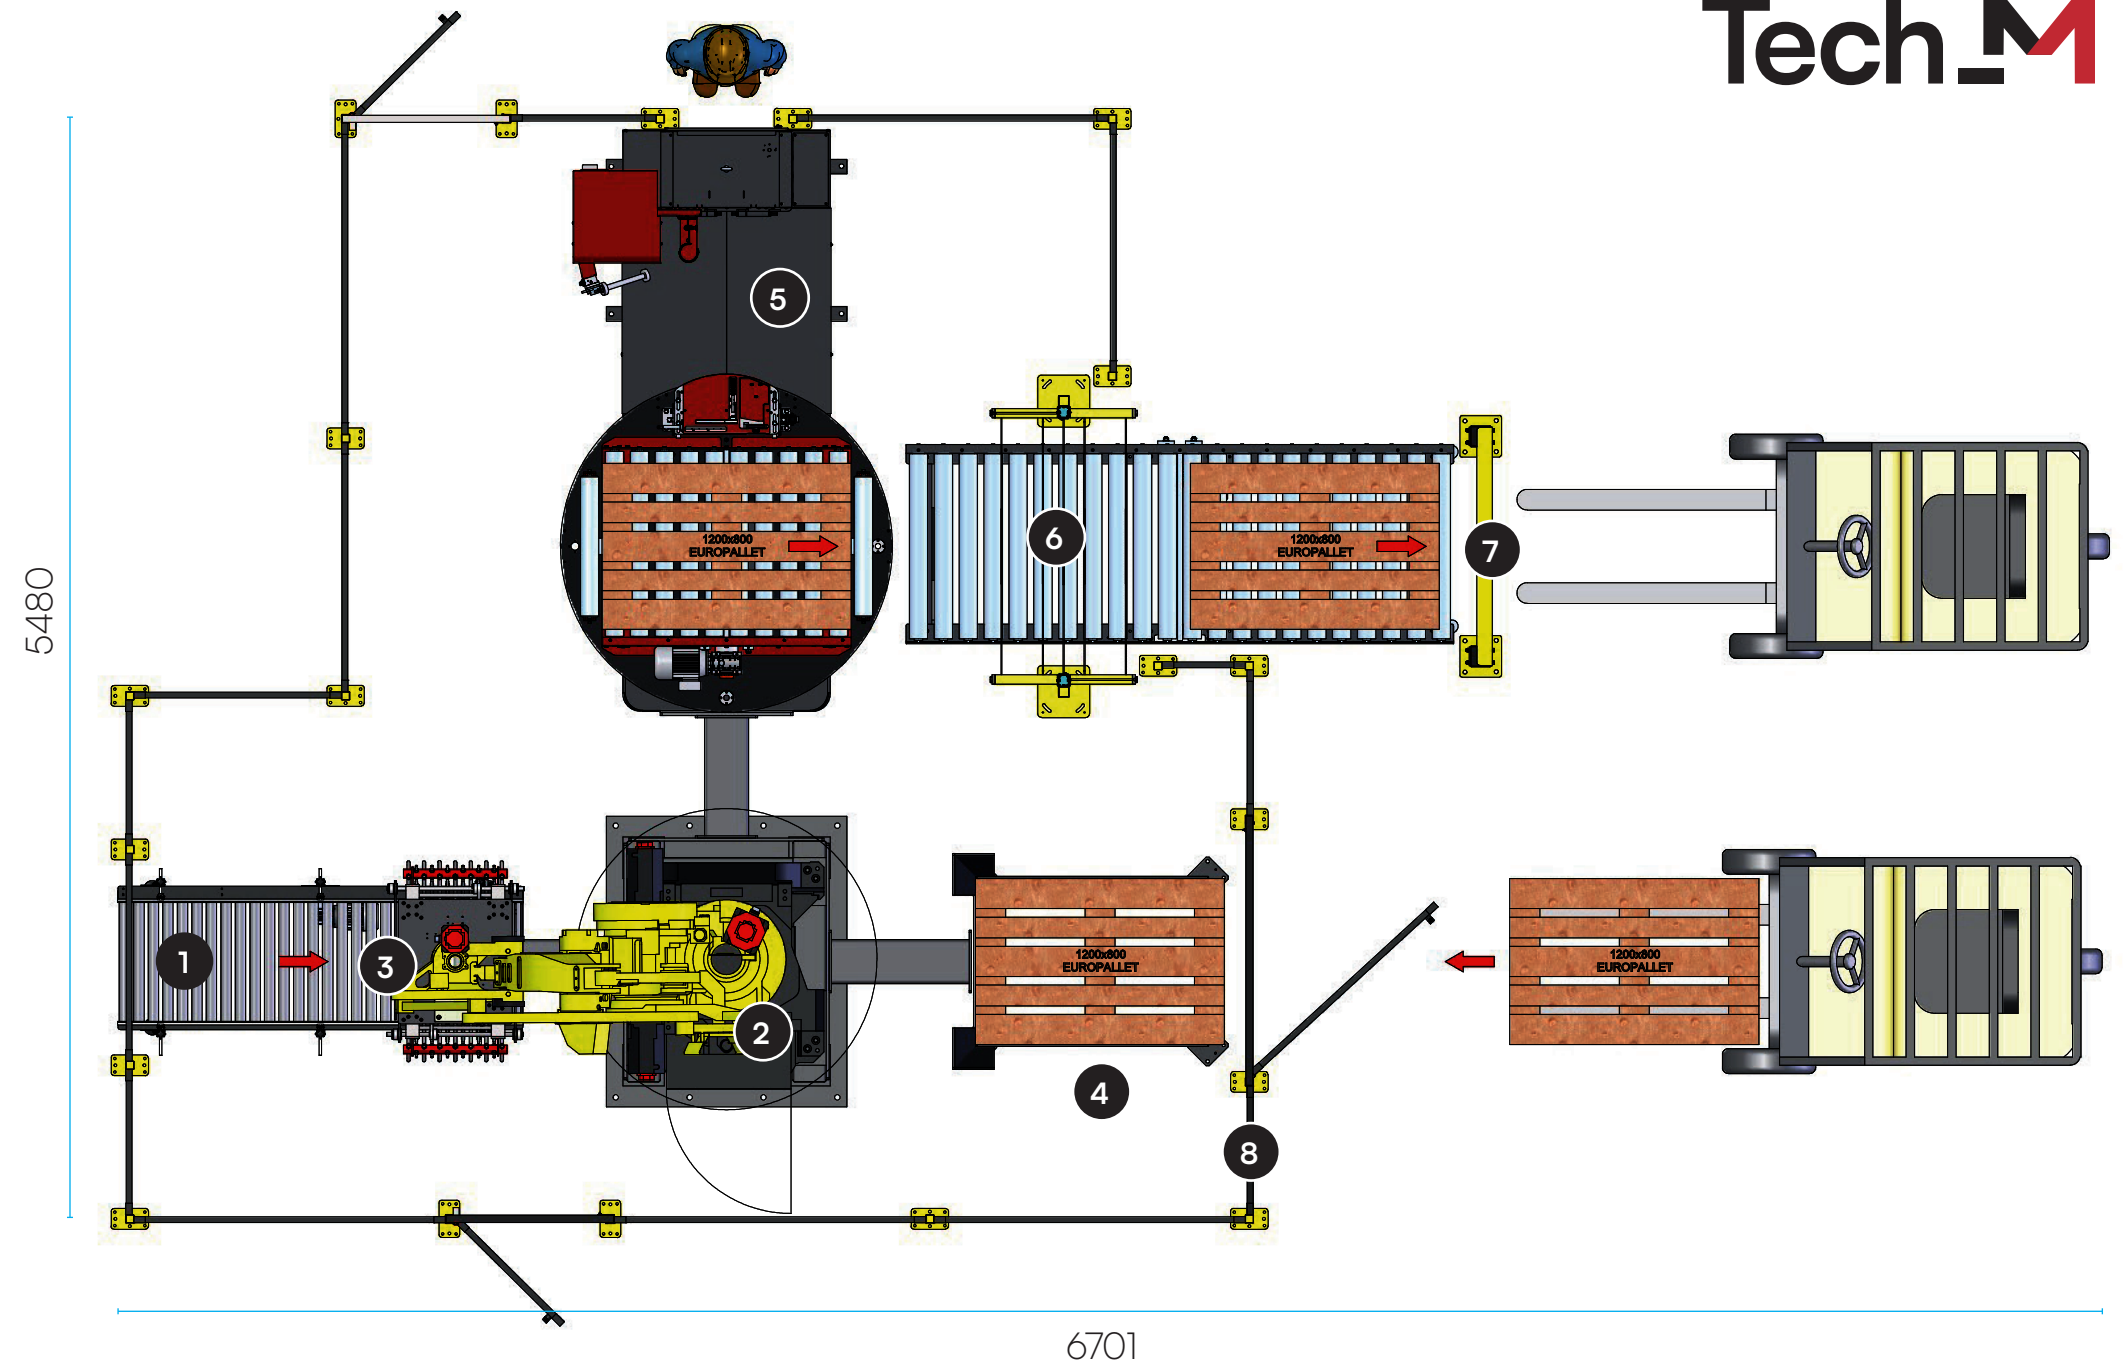

# CE01

## Palletizing and stretch wrapping of bags

Simultaneous palletizing and wrapping cell for bags or other unstable loads. Palletizing is done on the wrapping machine's platform and, every certain number of layers, stretch wrapping is done to progressively stabilize the load. The robot itself loads the empty pallet at the start of the cycle. Full pallets are expelled automatically.

| PRODUCT    |            | PRODUCTION |
|------------|------------|------------|
| Type       | Bags       | 7 bags/min |
| Dimensions | 600x400 mm |            |
| Weight     | 60 kg      |            |

| COMPONENTS |                                               |
|------------|-----------------------------------------------|
| 1          | Motorized roller conveyor                     |
| 2          | Palletizing robot                             |
| 3          | Robot gripper for handling sacks and pallets  |
| 4          | Empty pallet storage                          |
| 5          | LINE stretcht wrapping machine                |
| 6          | Conveyor                                      |
| 7          | Forklift stop with presence photocell         |
| 8          | Protective fencing system (access and safety) |
